PROFILE

I'm a cloud engineer who genuinely enjoys untangling hard problems — the kind where the root cause turns out to be three layers deeper than anyone expected. Over the past 4+ years I've worked across the full stack: building user-facing applications with React and Python, and owning the infrastructure those apps run on — AWS, OCI, Terraform, IAM, networking. At Vigelent I built a full IoT security platform from scratch, connecting physical devices to the cloud through AWS IoT Core, AppSync, and DynamoDB. At Oracle I've been doing that at enterprise scale, keeping production systems reliable and leading teams through complex deployments. I do my best work in environments where the infrastructure actually matters and there are real constraints to work within.

EXPERIENCE

Cloud Engineer, Oracle — March 2022 – Present | Remote

- Led a 3-engineer team to deploy a high availability OCI cloud environment (9 compute instances), replicating prod in Stage and provisioning QA and dev infrastructure, delivering on schedule and reducing post-release incidents by eliminating unvalidated config changes.
- Reduced infrastructure provisioning time by 40% by migrating manual cloud setups to modular Terraform IaC, versioned in an oracle internal repository — eliminating configuration drift across dev, qa, staging, and production environments.
- Improved mean time to detection (MTTD) by collaborating in the creation, maintenance and monitoring of dashboards with automated metric-based alerting, enabling the team to catch 150+ concurrent infrastructure anomalies before customer impact.
- Strengthened production IAM posture across 3 OCI tenancies, 3 VPCs and 15+ subnets supporting 200+ users by enforcing least-privilege role policies, implementing network segmentation, and standardizing encryption in transit and at rest — reducing IAM related security incidents after infrastructure deployment.
- Diagnosed and resolved cloud incidents spanning VPC networking, IAM, compute, and storage — reducing average resolution time through structured runbooks adopted by the team.
- Participated in end-to-end architecture governance and operational reliability of 24/7 multi-tenancy infrastructure (200+ compute instances across 3 tenancies, 3 VPCs and 15+ subnets) establishing monitoring standards, capacity planning practices, controlled changes and CVE vulnerability remediations.

Software Developer, Vigelent — Dec 2020 – Dec 2021 | CA, USA

- Collaborated in the built a full-stack IoT security hub from greenfield to production on AWS — connecting physical edge devices to a ReactNative + Python app using AWS IoT Core, AppSync (GraphQL), and DynamoDB, enabling real-time device monitoring, sub-second security alerting and user remediation actions in response to detected incidents.
- Secured a fleet of 10+ IoT devices by provisioning X.509 certificates, registering Things, and authoring per-device IoT policies with MQTT topic-level publish/subscribe controls — achieving zero unauthorized device communication events.
- Designed IoT Rules Engine pipelines to process, filter, and route 100% of inbound MQTT device messages to DynamoDB and downstream security triggers — enabling automated responses to device anomalies without human intervention.
- Integrated AWS AppSync real-time GraphQL subscriptions into the React frontend, replacing a polling-based approach and reducing UI latency from several seconds to under 500ms for live device state updates.
- Reduced mean incident resolution time by 50% by building troubleshooting runbooks covering common failure patterns across IoT Core, TLS certificates, Rules Engine, and AppSync — used by the full engineering team.

EDUCATION

B.S., Computer Science — Monterrey Institute of Technology and Higher Education | Dec 2021

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (May 2023)
- HashiCorp Certified: Terraform Associate (004) (Feb 2026)
- Oracle Cloud Infrastructure Certified Architect Associate (May 2022)
- Oracle Cloud Infrastructure Observability Professional (Apr 2024)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Bash/Shell

Fullstack: React, Node.js, GraphQL, REST APIs

Cloud & IaC: AWS, Oracle Cloud (OCI) and Terraform

Cloud Services: EC2, S3, CloudWatch, IAM, VPC, Lambda, IoT Core, AppSync, DynamoDB, API Gateway, SNS, SQS

DevOps & Tooling: CI/CD, Git, Linux, Monitoring, Incident Response
